I help you ship without chaos — keeping your delivery sharp, clean, and safe.

Scaled apps to 200k users. Led backend architecture and DevOps across open-source stacks.

Built businesses. Led teams. Fixed delivery breakdowns for SaaS and agencies.

From the desk of Viktor Jamrich

Bratislava, Slovakia

When deadlines slip, deployments fail, or junior devs create chaos — I quietly fix it before it costs you the client.

Hey there,

if you're running a dev agency or SaaS business and your team is juggling custom projects, tight timelines, and a growing pile of tech complexity...

And if the backend's getting messy, your deployments feel like rolling dice, or your developers are starting to move faster than they should...

Chances are, you don't need another developer.

You need someone who's been through the fire — and knows how to stop the bleeding before it spreads.

Who I Am

I'm Viktor Jamrich. I've:

- Built and scaled apps to 200,000+ monthly users without breaking production
- Fixed release processes that had clients screaming after every deployment
- Helped agencies and product teams go from chaotic codebases to clean, maintainable systems
- Built my own companies — including a brick-and-mortar business that survived lockdowns
- Led teams, hired people, fired people, and dealt with hot-headed egos — without drama

I understand the tech. I understand the business. And I understand the people.

Tech Stack Fluency

I work exclusively with modern open-source stacks:

- Backend: Laravel, Node.js, Python, ...
- Databases: PostgreSQL, TimescaleDB, MySQL, Redis/Valkey, ...
- Frontend: Vue, React, ...
- Infra/Ops: Docker, Kubernetes, Bitbucket, GitHub, Standalone linux servers, ...

If your stack is Microsoft or Java EE — I'm not your guy.

I work where I bring **real speed and certainty**, not guesswork.

Why Not Just Hire Someone Full-Time?

I've seen it too many times:

A founder posts a “senior dev” role. 30 applications. 10 interviews. 1 hire.

Then 4 weeks of onboarding, and another 4 weeks of realizing... this person can't own anything.

Now they've burned 2 months, €10k, and the next client milestone.

And they're back at square one — hiring again, while the system keeps rotting.

I'm the alternative.

No hand-holding. No ramp-up. Just clarity, speed, and outcomes from someone who's already handled systems at scale — and can **step in TODAY**.

What I Do

I'm not here to write hundreds of hours of code.

I'm here to make sure your team ships clean, fast, and without disasters.

You plug me into your team — remotely — and I fix things before they explode.

Here are the 3 ways I typically work with clients. Most teams land in one of these, depending on how bad the current state is and how fast they need clarity:

1. Launch Protection – €2,500 (flat)

For agencies and product teams about to launch — and don't want it to blow up.

What's included:

- ✓ I audit your backend, deployments, and delivery process
- ✓ I patch high-risk issues before they cause damage
- ✓ I verify or set up test + deploy pipelines
- ✓ I write your rollout playbook so the team knows exactly what to do
- ✓ I'm on standby during the launch window — in Slack, ready to step in

The outcome:

You don't miss deadlines.

You don't launch broken code.

You get paid on time.

Why this works:

Most launch delays aren't technical — they're operational.

I help your team ship with confidence, avoid last-minute chaos, and make sure clients never see the mess.

2. Delivery Guardrails – €2,000/month

For teams who ship code every week — and want to stop living on the edge.

What's included:

- ✓ I review key PRs and give async feedback on recurring issues (not every commit)
- ✓ I fix your CI/CD so releases stop being fire drills
- ✓ I set up test flows your team actually follows
- ✓ I review how your team ships — and improve the process so things don't get stuck or blow up
- ✓ I'm available in Slack daily (10–12 CET) for questions when something's unclear or a dev gets stuck
- ✓ Optional monthly strategy call

The outcome:

Your junior devs stay productive without creating hidden fires.

Your releases get boring — in the best possible way.

You stop praying before every deploy.

Why this works:

Most delivery problems don't come from slow devs — they come from messy processes, unclear expectations, and no one catching issues early.

I help you put in just enough structure to ship with confidence — without slowing your team down.

3. Fractional Tech Lead – €3,500/month

For founders who want a tech partner — without hiring a full-time CTO.

What's included:

- ✓ I own your system architecture and keep it aligned with the business
- ✓ I advise on tech debt, tradeoffs, and long-term decisions
- ✓ I support hiring — from screening to final call
- ✓ I talk to devs like a peer, not a manager
- ✓ I talk to founders like a partner, not a gatekeeper

The outcome:

You stop second-guessing technical decisions

You don't need to hire a full-time CTO to feel in control

You have someone who actually “gets it” — and moves fast

Why this works:

When founders lead tech without deep experience, progress slows down, risks pile up, and the team gets stuck. I step in to make the right calls, guide your team, and keep everything moving forward without drama.

If your situation doesn't quite fit, I can tailor a version — but only if we're aligned on outcomes and price range.

How I Work

This is not a full-time job. **It's high-trust, high-leverage collaboration.**

Kickoff Call

We start with a focused call to align on goals, risks, and how your team works. No fluff.

Slack Access

I check in daily (10–12 CET) for async questions and stuck issues. I respond outside that window when needed — no delays, no noise.

Ad-Hoc Calls

When Slack isn't enough, we jump on a call. Fast, clear, no ceremony.

Emergency Support

If production breaks, call me. I step in.

Optional Monthly Review

For ongoing work, we review goals and risks once a month — to stay ahead, not catch up.

You don't need to manage me. Just plug me in — and I'll help your team move faster, safer, and with fewer surprises.

Next Steps

I'm not looking for **just any** clients.

I'm looking for the right fit — a team where I can actually make a difference.

I only keep a few retainers active at a time.

If this sounds like what you've been looking for — message me directly and I'll send you available slots for a short intro call.

No sales pitch. Just a quick call to see if it makes sense.

Looking forward,

Viktor Jamrich
